

countries reaching self-sufficiency. As agricultural Waqf contributions to the gross domestic product in some countries are weak.

The research aims at the jurisprudential foundation of agricultural Waqf, clarifying its objectives as well as its investment ways, reviewing its history, and mentioning current successful experiences of its investment.

The research is based on both the inductive approach and the descriptive analytical approach.

The research is divided into four sections. The first section discusses the jurisprudential foundation of agricultural Waqf. The second section reviews the history of agricultural Waqf. The third section clarifies the ways of investing the agricultural Waqf. Finally, the fourth section highlights some current successful experiences of the agricultural Waqf in the Kingdom of Saudi Arabia.

The research concluded that Waqf agricultural land can be invested directly or indirectly. Moreover, there are current successful experiences of the agricultural Waqf such as Awqaf of Saleh Al-Rajhi, Awqaf of Soliman Al-Rajhi and Awqaf of Mohammed Al-Rajhi in the Kingdom of Saudi Arabia.

The research recommended that the agricultural Waqf be directed to crop diversification, focusing on wheat since its cultivation requires little water; therefore, rainwater can be sufficient. Furthermore, wheat requires extremely high temperatures, which corresponds to Saudi Arabia's geographical nature.

Study Abstract

Upon Islam diligence for agriculture, Muslims have desired to endow the agricultural land for the continuation and uninterrupted of the reward after death; so the early Muslims endowed the agricultural lands, gardens, orchards and wells; hence, they continued endowing them throughout the ages for Allah's sake. Therefore, this sector has acquired an enormous deal of agricultural lands.

Agricultural Waqf is not only one of the real economy backbones in Muslim countries but also the mainstay since most industries are based on agricultural production.

The research issue involves defining the objectives of agricultural waqf and identifying how to enable it by utilizing investment contracts that lead to successful outcomes, moreover includes examining the personal property of agricultural waqf investments, its contributions, and its clear impact on the development of waqf institutions. Furthermore, agricultural Waqf supports and develops the actual economy, which meets its goals and contributes to
